SUMMARY

Software engineer and founder building AI-powered products end to end, from architecture to production deployment. Built Sidewise, ArenaHQ, and Vibeln under Vibeln LLC, reaching 1,321 combined registered users at zero paid acquisition cost. Experienced across frontend, backend, AI infrastructure, deployment pipelines, and cloud services, including on-device and cloud ML inference, encrypted data handling, and production incident response under live user load. Developed multi-agent orchestration tools, audio-AI systems, and automated pipelines, focusing on performance, safety, and rapid product iteration.

SKILLS

Programming: Python, TypeScript, JavaScript, SQL

Frameworks: Next.js 14/15/16, React, Node.js, FastAPI, Express, Tailwind CSS

Databases & Storage: PostgreSQL, Neon Postgres, Drizzle ORM, Supabase, Vercel Blob, Redis

AI & ML: LLMs, RAG, agentic workflows (Claude Agent SDK), TensorFlow.js, Tesseract.js OCR, ElevenLabs API, Gemini API, OpenAI API, LangChain

Tools & Infra: Docker, Google Cloud Run, Vercel, Render, Git, GitHub Actions (CI/CD), WebRTC, WebSockets, REST APIs

EXPERIENCE

Founder and Lead Engineer @ Vibeln LLC

Jan 2025 - Present

vibeln.us / arenahq.us / sidewise.vercel.app

- Built ArenaHQ (arenahq.us), a live 1v1 competitive coding platform with WebRTC video verification, Supabase Realtime matchmaking, CodeMirror 6, and a sandboxed code execution API, scaling to 800+ users.
- Designed Sidewise's AI research pipeline utilizing Brave Search and Gemini 2.5 Flash, separating retrieval from synthesis to guarantee 100 percent source-backed summaries with zero model-hallucinated citations.
- Launched the flagship anonymous campus social network Vibeln (521 users, 10 percent active retention), implementing real-time WebSockets and Supabase row-level security (RLS) policies.
- Diagnosed and resolved 8+ production-critical failures across database and auth pipelines under live user load, maintaining 99 percent or higher uptime.

IT Coordinator and Publicity Chair @ NSLS Executive Board

Sep 2024 - Present

University of South Dakota

- Automated membership tracking and recruitment workflows using Python and Google Apps Script, reducing onboarding processing time by 50 percent (4 weeks to 2 weeks) and improving reporting accuracy.

PROJECTS

Scout @ Real-Time AI Vision Assistant for the Visually Impaired

2026

- Built a three-tier local-first computer vision pipeline (TensorFlow.js, Tesseract.js OCR, Gemini 2.5 Flash), cutting median inference latency to 80-150ms and reducing cloud API cost.
- Designed a scene-change filter (12 percent pixel-diff threshold) to skip redundant camera frames and implemented Web Speech API narration with iOS keepalive watchdogs.

eko @ AI-Assisted Multi-Track DAW and Audio Platform

2026 - Present

- Designed and built a two-service audio platform (Next.js + Python/FastAPI on Google Cloud Run) performing real-time pitch/rhythm analysis (librosa), MIDI synthesis, and AI voice cloning (ElevenLabs).
- Implemented secure service-to-service proxy patterns isolating private Blob storage and Gemini API melody note-completion calls from the client tier.

prism @ CTO & Multi-Agent VS Code Extension

2026

- Built a VS Code extension orchestrating multiple specialized AI coding agents (Claude Agent SDK) behind a human-in-the-loop approval gate for all shell and filesystem modifications.
- Designed a planner/executor agent architecture (CTO + 5 specialist roles) with per-role tool scoping and live task-status streaming to a custom webview UI.

myera @ Autonomous Job-Search Agent and PDF Pipeline

2026

- Built an autonomous job-application agent that sources, ranks, and auto-submits applications daily via a serverless cron pipeline (Next.js, Vercel Postgres/Blob, Claude API).
- Implemented a dual local/serverless PDF-rendering pipeline (Puppeteer / @sparticuz-chromium) to generate tailored resumes.

PETRI-Verse @ Autonomous Multi-Agent City Simulation

2025

- Developed a persistent, tick-based multi-agent city simulation (Express/Node.js) with a public observer dashboard and petition system, running on self-funded infrastructure.
- Designed a tick-based simulation loop and SSE (Server-Sent Events) stream to publish real-time KV world state updates across 9 public REST endpoints.

EDUCATION

B.A. Computer Science, Minor in Innovation and Entrepreneurship

Expected May 2027

University of South Dakota

Relevant Coursework: Data Structures and Algorithms, Systems Programming, Database Systems, Software Engineering

LEADERSHIP

- AI and Entrepreneurship Workshop Facilitator: designed and led community sessions for teenagers ages 13-16 covering AI, product building, customer discovery, and public speaking.
- NSLS Executive Board | USD INFORMS (authored 10-week operational plan, built admin portal) | USD Marketing Club
